### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Safran on February 1, 2005. The instant amendment serves to clarify that the respective gripping elements of the at least two robots are used as transport devices during the batching method.

The application has been amended as follows:

In the claims:

Claim 10 has been amended as follows:

10. A method for separating-out of supplied items for the batching of these items in weight-determined groups, said batching method comprising:
- a) performing a weight-determination of each item;
  - b) batching the items at a batch location in accordance with their weight and the weight of the items already placed at the batch location, or batching the items at the batch location as a combination of items available for selection;
  - c) providing transport equipment that includes at least two robots, each of which has a gripping element for selective gripping of an item;
  - d) providing a control unit that performs selective control of the transport equipment; and

[e)] e) using the control unit to arrange allocation of the individual items to respective receiving positions of items from the different items at the batch locations based upon weight-determined groups to achieve a predefined total weight at each receiving position, wherein the respective gripping elements are used to direct transport of an item from the batch location to a selected receiving position

~~[transporting the items to respective receiving positions based upon weight-determined groups to achieve a predefined total weight at each receiving position, wherein the transporting is performed by transport equipment which includes an associated control unit, wherein the control unit arranges the allocation of the individual items to respective receiving positions of items from the different items at the batch location, and performs selective control of the transport equipment, and wherein the transport equipment includes at least two robots, each of which has a gripping element for selective gripping of an item and direct transport of the item from a batch location to a selected receiving position] .~~
